Reflection on the Project:

I personally found this project to be extremely stressful due to the fact of engagement from the other members of the group. I was willing to do the Chatbot design and implementation as I had done a lot of research over the weeks since the project was put on moodle and knew what was involved, but as we were using my website design the other 2 members felt there would very little for them to do. Arivoli offered to do the chatbot while I worked on the website design and changing the website to submit this project. I asked him constantly did he need help and was told no it would one done for the submission and presentation. I realised the night before the presentation that we would not have a working chatbot on the webpage but would have a library and offered to design a quick one but was told we could demonstrate the working library of the chatbot and he would get the Chatbot done over the next few days. This did not happen and I was asked late Friday evening to work on the html, css and JS. I said I would work on it if they could do the JS side. This is still to be completed.

Sugeeth had no engagement until a week before the project presentation and we asked him to do the contact section of the contact page and I would upload it into the page. He gave the following contact page and we arranged a zoom with the 3 of us - this was on Tuesday the 19th of July. We asked him to fix it and when he did he changed a lot of the original code and I would not allow it to be pushed to the master branch. I arranged a meeting at 8 am on Saturday 23rd of July and asked him to explain why he did this and he told me he did not change the code.

Working with colleagues who have no interest or inclination to engage is extremely stressful especially when other projects suffer as a result. My Web technology project will defiantly not be a I would like it as I have spent the whole weekend trying to fix or do others work.
